

Edge D-Arm Pin

Dual detaching technology means dual surprise for thieves.

Do shoplifters bring illegal detachers to your stores? The Edge D-Arm Pin tag has a big surprise for them: it will alarm if removed with just a magnet detacher.

Instead, the technology within the tag needs to first be passed over a deactivator pad at the point of sale, and then removed with a magnetic detacher - something that is very easy for your store associates, but difficult for shoplifters.

No additional training or equipment is needed for your employees as the Edge D-Arm Pin tag works with your existing detachers and deactivators.

For added deterrence, the tag features a blinking LED light, and a loud 95 dB alarm will sound if the tag is compromised in any way.

KEY FEATURES

- > Unique D-Arm technology provides protection against illegal detachers
- > Easy application and removal
- > Available in white, black, orange or custom colors
- > Available in AM or RF (RFID can be added upon request)
- > Two alarm standard. Triple alarm optional.
- > Standard clutch. Super clutch optional.
